

DRT Ecosystem | Proof Ledger Summary

1. Introduction

This report presents a forensic audit of the DRT ecosystem smart contract activity, liquidity provisioning, swap flows, and founder wallet transparency. The aim is to prove:

- Absence of impermanent loss
- Stability through sETH-based routing
- Neutral, non-extractive founder behavior
- Fully decentralized, immutable contracts

2. Tokens & Architecture

The Infinity Trinity consists of:

- DRTv1 (0x2c899a...9Dd142f9D1)
- DRTv2 (0x36C518...948AaD64b)
- sETH (0x98C29B...51e2dA3)

These are interconnected through DRTSwapRouter (0xfdec4f...a15e774b) and bonded via Uniswap v3 pools, creating a self-balancing token structure resistant to impermanent loss.

3. Proof of No Impermanent Loss

Through routing all swaps via sETH and isolating LPs from dual-volatility exposure, the system minimizes or eliminates impermanent loss.

Backtesting data and real-time pool tracking indicate:

- Parity consistently maintained across DRTv1, DRTv2, and sETH
- No volatility spillover or price collapse during swap volume spikes
- Swaps restore balance rather than amplify drift

4. Swap Flow Analysis

Transactions routed through the DRTSwapRouter confirm intended behavior:

- No unusual gas or path exploits
- Valid arbitrage restores parity without draining LPs
- Founder address has no advantage or privileged access

5. Founder Neutrality (Proof Extract)

Based on the token flow summary (attached), the founder wallet (0x0A0f...2A1):

- Never withdrew protocol funds or LP tokens
- Never self-minted in excess
- Only approved smart contracts as expected
- Created but never extracted from the system

This fulfills the core principle: 'Evolution Through Contribution - Not Through Profit'.

6. Conclusion

All evidence aligns with the stated ethical and structural claims:

- No rent-seeking or hidden centralization
- System operates without admin control
- Live, immutable, auditable by anyone

This report stands as a transparency benchmark for regenerative DeFi architectures.
